PROBLEM STATEMENT

The current underwriting process at CREDEQ is hindered by a fragmented data landscape that creates silos across partners, leading to significant financial leakage. This system is predominantly **slow, inconsistent, and heavily manual**, resulting in avoidable delays and a high risk of human error.

OBJECTIVES

Identify inefficiencies and bottlenecks in the underwriting process.

Integrate fragmented data to eliminate functional silos.

Detect and quantify financial leakage points across the process.

Enhance decision-making and efficiency through data-driven insights.

Current Performance : KPI (Manual Underwriting Process Analysis)

Queue / Wait

Reduced Wait (Future)

CURRENT STATE

Total Lead Time: 16.7 days | Process: 6 days | Queue / Wait: 10.7 days (64% waste)

Total Lead Time: 16.7 days | Process: 6 days | Queue/Wait: 10.7 days | 64% waste

Queue breakdown: Q1=1.2 · Q2=1.5 · Q3=1.5 · Q4=2.0 · Q5=1.5 · Q6=1.5 · Q7=1.5 = 10.7 days

FUTURE STATE

Target: 8 days | Process: 5.5 days | Queue / Wait: 2.5 days (31% waste) | Saves 8.7 days

Target Lead Time: 8 days | Process: 5.5 days | Queue/Wait: 2.5 days | 31% waste | Saves 8.7 days

Queue breakdown: $FQ1=0.3 \cdot FQ2=0.5 \cdot FQ3=0.3 \cdot FQ4=0.5 \cdot FQ5=0.3 \cdot FQ6=0.3 \cdot FQ7=0.3 = 2.5$ days

Root Causes — Manual Bottlenecks

Analysis of inefficiencies in the underwriting process

PROCESS ANALYSIS

Document Verification

Manual collection and review, back-and-forth for missing items, inconsistent formats

- High impact on turnaround time

Credit Checks

Repeated pulls, re-keying between systems, inconsistent data timing

- System integration issues

Risk Assessment

Narrative-heavy reviews, scattered information, reliance on manual judgment

- Subjective evaluation process

Why this slows the process

Longer queues and handoffs

Multiple touchpoints create delays

Higher workload and rework

Manual tasks increase processing time

Greater risk of human error

Manual data entry inconsistencies

Inconsistent outcomes

Lack of standardization in process

Recommendations

API + LLM Automation & Underwriting Improvements

API-driven automation

Real-time data retrieval and validation

- ✓ Real-time credit and verification checks
- ✓ Automated document ingestion and validation
- ✓ Fewer manual handoffs and re-keying

LLM underwriting support

AI-powered decision assistance

- ✓ Summarize documents and extract key information
- ✓ Flag inconsistencies for review
- ✓ Human oversight on all AI-assisted decisions

Digital site visit scorecard

Automated pre-visit intelligence feeds into 4C composite score

- ✓ Auto-pulls external risk flags before each visit
- ✓ Poor scores trigger automatic escalation or decline

Automate the 4C scoring engine

Character, Credibility, Capital & Capability in real time

- ✓ Live data feeds — credit bureaus, audits, broker ratings
- ✓ Hard gate rules enforced before committee review

EXPECTED OPERATIONAL IMPACT

Faster turnaround —
Automation eliminates
manual bottlenecks,
cutting decision time
significantly.

Improved consistency
— Uniform 4C scoring
criteria applied across
all underwriters.

Reduced human error
— Hard gate rules
block non-compliant
applications before
committee.

Higher team capacity
— Underwriters focus
on complex decisions;
routine tasks handled
by the platform.
